Subject Per-product type segmentation thresholds

Description of Problem or Suggestion:

To minimize manual operation impacts in servicing ops intervention messages for acceptance of automated segmentation of a request, media volume thresholds need to be definable on a per product basis. This is especially desirable in the case of largely static (in size) products.

Originator's Recommendation

- 1) Provide per-product type segmentation thresholding capabilities.
- 2) Consider providing a capability for DAAC operations mgt to force segregation of product types on different media as a means to lesson complexity of thresholding algorithms by product.
